

Best collaborative project management software

When you're leading a team project, you need specific software that ensures successful project delivery. As such, you'll require project management software that ensures seamless collaboration across multiple users. Efficient sharing features and high-level security features are the major features software should possess.

- ProjectOne

It allows teams to achieve the project's objective by considering the project dimensions. The software will allow you to keep a vigilant eye on your project team's workload for measuring overall progress. You can gain access to real-time charts and similar visual highlights. These visual highlights can be used for keeping work on a track, sharing work status, and evaluating potential issues.

- Wrike

Design, marketing, and product teams prefer the seamless utility features of Wrike. The collaborative project management tool can allow the team members to induce changes and sign-on through a single app. This tool also ensures the best security and backup since sensitive project details aren't stored on the onsite hardware. Storing all collaboration features within a single cloud-based platform can reduce the time required for sending emails forth and back.

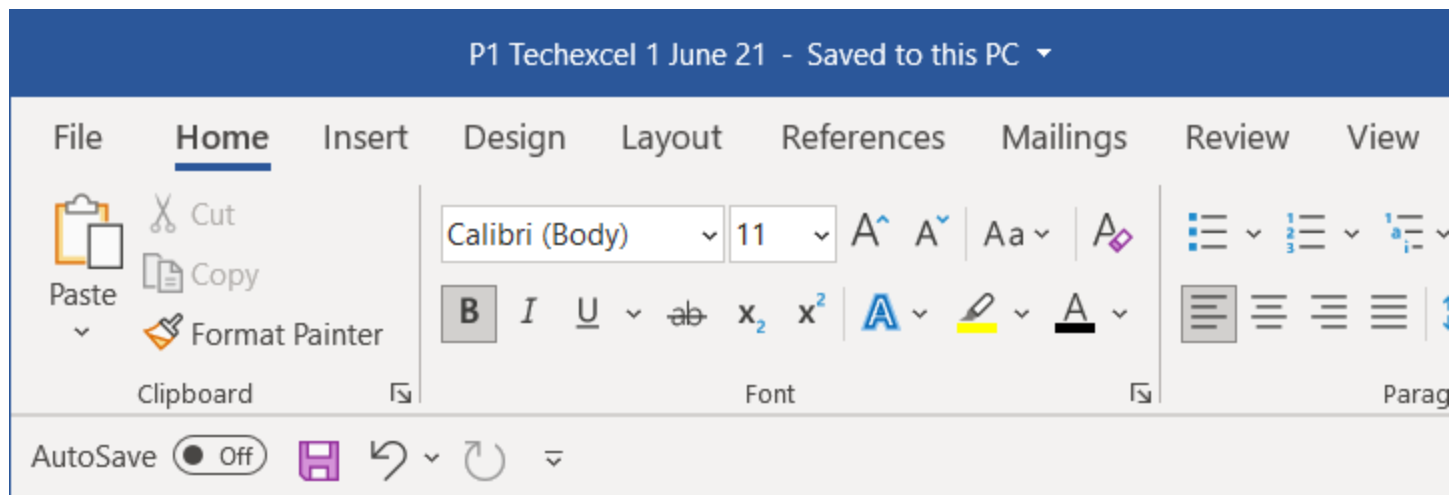

- Asana

Asana is unique [collaborative project management software](#) that's deployed for both business-focused and creative projects. Asana can effectively break down a project card-wise. These cards encompass the project's meaning, the person it's assigned to, and its due date. The card's system is efficient for large project teams that seek several people to get involved in the steps carried out during the planning procedure.

Users will be responsible for carrying out only the assigned assignments instead of a cluttered system that shows what everyone else is performing. Asana can allow the project managers to create separate tabs that display who's working on a specific task.

Now that you have been working remotely for over a year due to the outbreak of Covid-19, you'll require an app that will assist you in keeping track of progress and work hours. The **remote work management software** can successfully record the number of hours your team members are working. Besides, this software comes with features like URL tracking, idle time reminders, and URL tracking.
